

Lester Power Davits

By Ultimate Die Corporation

For Motor Vessels and
Sailboats, 30 Feet and Up

**90
Second
Launch
Time!**

Simple, Rapid, Winch-free

- Stainless steel units - electro polish (std)
Options: powder coat or bright polish
- Lifts dinghy and motor combinations up to 1000 lbs.
(Custom design available for heavier requirements)
- Water resistant control switches
- Keychain mounted radio controlled
- Automatically stops at either end
- No blockage of vision on the bow
- No winch, no tangles

Power Davits, by Ultimate Die Corporation, offer the optimum in dinghy handling and storage. These transom mounted davits allow rapid launching and retrieval of yacht tenders or P.W.C.'s to 1000 lbs.

The davits are made of stainless steel. Each davit is individually controlled and can be lowered or raised to allow draining of any accumulated water. Simple snap eyes rapidly attach the tender to the davits. Since no winches are involved, there are no ropes or cables to get tangled or jammed.

Davits are controlled through water resistant push button switches. These switches are panel mounted in a location convenient to the davits. The ultimate control option is a keychain mounted radio remote control unit. Power Davits automatically stop when the davit reaches either end of its travel.

Anyone who has handled dinghys, whether just manually dragging them on or off a boat, or with the systems available today, will appreciate the ease and convenience of this new approach.

“ We ordered the system, spent 2 days installing and have been using every weekend. Would we recommend this system... YES! This system meets or exceeds all expectations... high quality parts (almost all are Stainless Steel), ease of installation, touch of a button 90 second launch/retrieval, does not interfere with use of swim platform or ladder, and offers a great cost/value equation. If your intent is to use your dingy, I do not think that there is a better system available. Liberty - T.C. ”

“ Ultimate Die did a great job, very professional. We now have a quick easy system on our Kroger. The flick of a switch and down she goes. Cables forward and aft support her, and we have extra straps to attach when at sea to stop any swinging around in rough weather.

It has solved all our dinghy problems. Not cheap but the ease of deployment and the style of this system is great. We recommend its installation for other Kroger owners looking for the answer to what shall we do with the dinghy? **A. and R. G.** ”

”

“ I installed Russ's PowerDavits on my last boat, a 35' Cruiser Motor Yacht. They worked so well that before I bought my present 47' Carver Motor Yacht, I contacted Russ to design a new system which would allow complete access to the swim platform when the dinghy was in the raised position and would also allow easy access from the swim platform for my 87 lb. dog.

Russ's dedication and sincerity to his customers and continuous support for his product is unbelievable. I would recommend this product to any boater who wants to make boating more pleasurable. **M. Rappaport** ”
